

Palmidol® PEA

Guardian of their comfort in life

Pet Owner Information Leaflet: Palmidol® PEA

What is PEA?

Palmitoylethanolamide (PEA) is a natural molecule produced in the body. It is part of the endocannabinoid (EC) system, which plays a crucial role in regulating the nervous and immune systems.

The EC system has received much attention in recent medical research since potent stimulators of endocannabinoid receptors in the body (most notably cannabis derivatives) have shown promise in controlling pain and inflammation.

Being a chemical already present in the body, PEA offers a more natural way to modulate the endocannabinoid system. Unlike many traditional EC stimulants, PEA is non-addictive and has no psychoactive side effects.

Extensive research in both humans and animals has shown that supplementation with PEA has many beneficial effects including increases in patient comfort.

What is Palmidol® PEA?

PEA in its raw form is not easily absorbed into the body when given by mouth. **Palmidol® PEA** however has been specially formulated with micronized PEA to significantly enhance its absorption and maximise the benefits your pet will receive. It is supplied in easy to administer capsules which can also be sprinkled on food.

Guardian of their comfort in life

Why has my vet recommended Palmidol® PEA?

Vets will typically recommend **Palmidol® PEA** to increase comfort levels and quality of life in conditions associated with discomfort and / or inflammation.

These include:

- **Joint conditions:** It supports the reduction of inflammation and maintains cartilage health.
- **Skin Conditions:** Reduces the release of pro-inflammatory mediators from skin cells
- **Neurological Conditions:** It promotes the proper functioning of nerve fibres

How to Use Palmidol® PEA

Administration:

- **Dogs:** 1 capsule per 10kg of body weight, once a day
- **Cats:** 1 capsule, once a day

The capsules can be swallowed directly with food or opened and sprinkled on top of the food.

The starting amount can be increased if needed, based on your vet's advice.

Presentation:

Available in a box of 30 capsules or a dispenser of 20 blisters, each containing 15 capsules.

Palmidol® PEA

Guardian of their comfort in life

What to Expect

Initial Effects:

- You may start to see increases in your pet's comfort levels within a few days to weeks
- The reduced discomfort can help your pet lead a more active and happier life

Long-term Benefits:

- **Increased Joint Health:** Regular use can help maintain joint health and mobility
- **Better Skin Condition:** Reduction in inflammation can lead to healthier skin and coat
- **Enhanced Neurological Function:** Supports nerve health, which can be particularly helpful for pets with neurological conditions.

Safety and Tolerance:

- **Palmidol® PEA** is well-tolerated with no known risk of addiction
- It utilises the body's natural physiological strengths to balance the endocannabinoid system without significant side effects

Key Points

- **Palmidol® PEA** is a natural product that helps increase comfort levels in conditions associated with discomfort and inflammation
- Easy to administer
- Promotes overall well-being and comfort in pets

For more information or specific concerns, please consult your veterinarian.

This leaflet aims to provide a clear understanding of why **Palmidol® PEA** has been recommended for your pet, what it is, how to use it, and what to expect from its usage. Always follow your vet's instructions and monitor your pet's response.
